

Stadium Australia

Location

Sydney, Australia

Client

Multiplex Pty Ltd/Olympic Coordination Authority

Project Value

AUD\$500.0 Million

Start Date

December 1996

Completion Date

September 2003

Office Responsible

Cardno Young

Responsibilities

Cardno was appointed as 'Arena Consultant' to design, document and provide specialist supervision for all works within the arena.

Project Scope

Cardno was appointed as 'Arena Consultant' to design, document and provide specialist supervision for all works within the arena, including the track and field facilities, conversion for rugby league, rugby union and soccer pre-2000 and ultimate reconfiguring to a major multi-purpose stadium post-2000.

This stadium was designed to cater for rugby union, rugby league and soccer competition during the pre-Olympics period.

The grass infield consists of a reinforced sand profile, perched water table with a turf surface. The turf surface was temporarily extended over the synthetic surfaced athletics track to provide the necessary football playing surface during the pre-Olympics period. Post-Olympics the athletic track was removed and the turf extended to provide a competition arena for rugby union, rugby league, soccer and AFL, the latter achieved by moveable seating tiers within the arena.
