

Safe Design Policy

The Cardno group of companies delivers a diverse range of professional services to plan, design, manage, deliver and improve physical and social infrastructure for local and international communities.

In providing our professional services, we make decisions that impact on the Workplace Health and Safety of people who use our deliverables.

Management principles which consider environmental sustainability, health and safety must be adopted by the whole team when addressing design in all phases of a project.

Cardno will strive to encourage a culture where environmental, health and safety components of the projects on which we are working are a focus from concept design to consideration of the operational and maintenance requirements well after the project is completed.

As designers, we are driven by the following six principles for creating a strong safety culture. These principles are to operate at both corporate and project levels.

These principles of good practice are:

- Principle 1: Demonstrate Safety Leadership;
- Principle 2: Promote Safety in Design ;
- Principle 3: Communicate Safety Information;
- Principle 4: Manage Safety Risks;
- Principle 5: Continuously Improve Safety Performance;
- Principle 6: Entrench Safety Practices;

Achieving the aims of this policy supports Cardno's vision to be a world leader in the provision of professional services for the improvement of physical and social infrastructure, locally and internationally.
